EXPERIENCE

Senior Software Engineer **SRM Asset**
03/2026 – present

- Build backend integrations with B3 and CERC registries for Duplicatas Escriturais (book-entry trade receivables) – a regulated Brazilian receivables-registration rail.
- Integrate QI Tech banking- and credit-as-a-service APIs into the platform.
- AI-accelerated delivery: RAG over regulatory and API documentation, the BMAD agile-AI workflow, and LLM best practices – evals, structured output, guardrails, MCP tooling.

Java | Spring | Aurora PostgreSQL | AWS | Docker | MyBatis | RabbitMQ | Keycloak | Terraform | RAG | BMAD | MCP

Senior Engineer **C6 Bank**
04/2025 – 03/2026

- Own design and operation of high-availability credit-granting services for one of Brazil's largest digital banks.
- Drive domain-driven design across credit-decision domains; champion correctness, observability, and recovery patterns in production code paths.
- Information-security posture: secrets management, least-privilege access, hardened CI/CD via Harness.

Kotlin | Spring | MongoDB | PostgreSQL | Docker | Harness | Grafana | Splunk | Koin/Javalin | DDD | Event Sourcing

Software Engineer **Fiserv**
03/2024 – 04/2025

- Delivered POS-platform services across global merchant footprint; owned monitoring, alerting, and disaster-recovery posture.
- Led DevSecOps efforts: Fortify + Sonar gating in CI/CD, CyberArk-backed secrets, hardened release pipelines.
- Wrote durable technical and process documentation that outlasts the team rotation.

Spring | Oracle SQL | Docker | Splunk | Dynatrace | Fortify | Sonar | CyberArk | Redis | Mercurial

Backend Developer **Upwork**
Oct 2022 – Jan 2024

- Solo contractor serving international clients: backend services and web data-extraction / automation pipelines across diverse sources.
- Daily English-language client communication, scoping, and delivery.

Python | lxml | BeautifulSoup | pup | Headless Chromium | PhantomJS | Bash

EDUCATION

B.Sc. Computer Science **Mackenzie Presbyterian University**
2020

- Python ●●●●○
- Docker / CI/CD ●●●●○
- GenAI / RAG / LLM ●●●●○
- C/C++ ●●●○○

Backend Engineer **Conta Azul** Sep 2021 – Aug 2022

- Built a fiscal-obligations engine that automated periodic and ad-hoc SPED / eSocial / EFD-Reinf submissions for SMB accounting customers.
- Ran the service on AWS-native primitives (queues, storage) with infrastructure-as-code via Terraform.

Java | Spring | AWS | Terraform | PostgreSQL | LogDNA

Backend Engineer **Grão** Dec 2020 – Sep 2021

- Implemented Pix instant-payment integration in Kotlin from kickoff through production launch – a regulated, central-bank-mandated rail.
- Performance-focused schema and entity modeling; container-based test and production environments.
- Scalable REST API design with QA automation in the loop.

Kotlin | Java EE | Spring | MySQL | Feign | Firebase | GitLab CI | Graylog | Postman | Svelte

Software Developer **Raia Drogasil** Jan 2020 – Dec 2020

- Brought selling-operations software into LGPD compliance during the law's enforcement onset.
- Integrated biometric readers and thermal printers into the in-store stack; daily Oracle modeling.

Java EE | Oracle SQL | JSF/PrimeFaces | JBoss | WebLogic | DTAP | TDD

Software Developer **Sys4Bank** Mar 2016 – Jan 2020

- First production-grade exposure: Spring Boot services backing banking back-office.
- Introduced containerization and Travis CI pipelines to a team coming from manual deployment.

Java | Spring Boot | MSSQL | Maven | Ant | Bash | Travis CI | Linux

PROJECTS

RAT-via-Telegram ★600+ **Windows RAT over Telegram**

dte ★300+ **Date & time processing language**

dotty **Dotfiles sync & version manager**
