Marcelo Vironda Rozanti

Senior Backend Engineer | Software Engineer | Java | Kotlin | Spring Boot
São Paulo, Brazil | mvrozanti@hotmail.com | linkedin.com/in/mvrozanti | github.com/mvrozanti | mvrozanti.github.io

PROFESSIONAL SUMMARY

Senior Backend Software Engineer with 10+ years of experience designing, building, and operating production-grade backend systems for banking, payments, and regulated financial services. Expert in Java and Kotlin on the Spring / Spring Boot ecosystem. Hands-on with PostgreSQL, MongoDB, MySQL, Oracle, MSSQL, Redis. Experienced in AWS cloud infrastructure, Docker containerization, CI/CD (GitLab, Harness, Travis), Terraform IaC, observability (Splunk, Grafana, Dynatrace), application security (Fortify, Sonar, CyberArk). Domain expertise in Brazilian fintech: Pix instant payments, SPED / eSocial / EFD-Reinf fiscal automation, LGPD data-protection compliance, credit decisioning, and receivables registration (Duplicatas Escriturais via B3 / CERC). Increasingly AI-assisted in delivery: Retrieval-Augmented Generation (RAG), LLM evaluation, agentic coding, the BMAD method, and MCP. Native Portuguese; fluent English; intermediate Spanish.

CORE SKILLS

- **Programming languages**: Java (8, 11, 15, 16, 17, 21), Kotlin, Python, Shell / Bash, C, C++
- **Frameworks**: Spring, Spring Boot, Spring Security, Spring Data, MyBatis, Javalin, Koin, JSF, PrimeFaces, Java EE
- **Databases**: PostgreSQL, Aurora PostgreSQL, MongoDB, MySQL, Oracle SQL Server, Microsoft SQL Server, Redis
- **Cloud & DevOps**: AWS (SQS, SNS, S3, EC2, Lambda), Docker, Kubernetes-adjacent, Terraform / HCL, Harness, GitLab CI / CD, Travis CI, Maven, Ant
- **Messaging & auth**: RabbitMQ, Keycloak
- **AI / LLM**: Retrieval-Augmented Generation (RAG), LLM evaluation, agentic coding, BMAD method, MCP, prompt engineering, structured output / guardrails
- **Observability & security**: Splunk, Grafana, Dynatrace, Graylog, LogDNA, Fortify, SonarQube, CyberArk
- **Operating systems**: Linux (daily driver since 2009)
- **Methodologies**: Domain-Driven Design (DDD), Event Sourcing, Test-Driven Development (TDD), DevSecOps, CI / CD, Agile, DTAP
- **Domains**: Banking, payments, Pix, POS / card-present, credit decisioning, fiscal automation, LGPD compliance, receivables registration (Duplicatas Escriturais, B3 / CERC)

PROFESSIONAL EXPERIENCE

SRM Asset – Senior Software Engineer — March 2026 – Present
São Paulo, Brazil

- Backend integrations with B3 and CERC registries for Duplicatas Escriturais (book-entry trade receivables), a regulated Brazilian receivables-registration rail
- Integration with QI Tech banking- and credit-as-a-service APIs
- AI-accelerated delivery: Retrieval-Augmented Generation (RAG) over regulatory and API docs, BMAD agile-AI method, LLM best practices (evaluations, structured output, guardrails, MCP, prompt engineering)
- Java (8-21), Spring, Aurora PostgreSQL, AWS, Docker, MyBatis, RabbitMQ, Keycloak, Terraform / HCL

C6 Bank – Senior Software Engineer — April 2025 – March 2026
São Paulo, Brazil

- Design, implement, and maintain high-availability backend systems for credit granting at one of Brazil's largest digital banks
- Domain-Driven Design across credit-decision domains in Kotlin and Spring
- Information security focus: secrets management, least-privilege access, hardened CI / CD via Harness
- Observability via Splunk and Grafana; data layer on MongoDB and PostgreSQL; containerized deployments via Docker

Fiserv – Software Engineer — March 2024 – April 2025
São Paulo, Brazil

- Delivered POS-platform backend services for card-present payments
- Owned disaster-prevention and recovery posture for production services
- Led DevSecOps adoption: Fortify and SonarQube gating in CI, CyberArk for secrets, hardened release pipelines on Mercurial flows
- Operated production services with Splunk and Dynatrace; Oracle SQL Server and Redis data layer
- Authored technical and process documentation supporting team rotation

Upwork – Backend Developer (Freelance) October 2022 – January 2024
Remote

- Solo contractor for international clients: backend services and web data-extraction / scraping and automation pipelines across diverse sources
- English-language client communication, scoping, and delivery
- Python (lxml, BeautifulSoup, pup), headless browsers (Chromium, PhantomJS), Bash

Conta Azul – Backend Developer September 2021 – August 2022
São Paulo, Brazil

- Built fiscal-obligations automation engine for Brazilian SPED, eSocial, and EFD-Reinf submissions
- Periodic and event-driven processing on AWS-native primitives (SQS, S3)
- Infrastructure-as-code via Terraform; PostgreSQL data layer
- Java 8 / 11 / 15 / 16 with Spring; LogDNA observability

Grão – Backend Developer December 2020 – September 2021
São Paulo, Brazil

- Implemented Brazilian instant-payment system (Pix) backend integration in Kotlin from kickoff through production launch
- Performance-focused database schema and entity modeling
- Scalable REST API design; QA automation in delivery loop
- Containerized test and production environments; Java EE, Kotlin, MySQL, Spring, Feign Client, Firebase, GitLab CI / CD, Graylog, Newman / Postman, Tomcat, Svelte

Raia Drogasil – Software Developer January 2020 – December 2020
São Paulo, Brazil

- Brought selling-operations software into compliance with Brazilian LGPD data-protection law
- Integrated biometric readers and thermal printers in retail stack
- Daily Oracle SQL modeling; Java EE, Java Applets, JSF / PrimeFaces, JBoss, WebLogic, Spring
- First contact with DTAP (Development-Test-Acceptance-Production) phased deployment approach; TDD

Sys4Bank – Software Developer March 2016 – January 2020
São Paulo, Brazil

- Backend development for banking infrastructure: corporate, financial, credit, and account workflows
- Introduced containerization and Travis CI / CD pipelines to a team coming from manual deployment
- Daily Microsoft SQL Server modeling
- Java, Spring Boot, MSSQL, Maven, Ant, Bash, Linux

EDUCATION

Bachelor of Science in Computer Science, Universidade Presbiteriana Mackenzie, São Paulo, Brazil – 2020
Dissertation: *Three Experiments with Asynchronous Update Schedule by Neighborhood Priority in Elementary Cellular Automata*
